Academic Year 2024
Basic Development and Operation

Lab 12. Final Work

Objective: You have finished this work

1. Create a new Github Repository
2. On the project, create website which explain about yourselves including the image of you.
3. Create the Docker file to create the docker to deploy your web site.
4. Create the Github workflow file to deploy your application
5. Deploy your repository using docker compose technique
6. Inside docker compose file, you have to add any todo application (you can search for the application in the github page: open source)
7. Deploy both application (your application, and application in 6.) to one server at the same server and the same deployment step.
8. Screen Record the process from 1. to 7. in .mp4

To submit the work:

1. Update your README file, add this following information in **README.md**
 1. Name and surname
 2. Your image
 3. Your student id
 4. Your url for both application.
(if you have more than 1 people, add the info. of your team with % distribution for each person)
2. Set your repository to be **public** (**please make sure that you set it as public, if I cannot access to your repo, it means zero score)
3. Post your **github url** in the assignment
4. Post your **.mp4** in the assignment (or URL to the video)

Deadline:

26 June 2026 00:00 China Time

Group:

You can do it alone or 2 or 3 people ('3' is the maximum per group)

Score:

The score will be weighted based on

1. GitHub Repository (Repo, Commit, README)
2. Personal Website (real picture and content)
3. Dockerfile (Build Image)
4. GitHub Workflow (CI/CD)
5. Docker Compose
6. Todo Application
7. Deploy Both Applications on Same Server
